

How Would You Rate  
Your Company's  
Network Security?

# Gallagher, Flynn Will Use An 8 Step Assessment That is Risk Focused.

## And Cost Free.

At Gallagher, Flynn we understand that "network security" can mean different things to different organizations, and have developed an **8 Step Network Security Risk Assessment** designed to provide you with a score, assessment, and snapshot of your organization's security environment.

### **Each of the 8 Steps of the Risk Assessment process will focus on:**

1. Defining the attribute to be measured
2. Identifying the risk of that attribute for your organization
3. Assessing the security precautions currently in place for that attribute

**WHAT WE WILL DO:** We will spend up to two hours on site assessing your security infrastructure through our 8 Step Risk Assessment. We will inventory and assess the major security components we recommend businesses to consider.

### **Specifically, we will:**

1. Conduct an inventory of your current security solutions
2. Conduct a high-level assessment of how your current security solutions were originally configured and are maintained on an on-going basis
3. Determine security risk tolerance of key decision makers
4. Develop Security Risk Report Card based on current security position and tolerance for risk, specific to your business.

**WHAT YOU WILL RECEIVE:** At the end of our Risk Assessment, we will provide you with:

1. **A SECURITY REPORT CARD:** An analysis of 8 major security areas, providing you with a score on each, and where your business is positioned relative to the risk tolerance.

RISK AREA (Security Component)	S C O R E	RISK TO NETWORK	ASSESSMENT	GFC SOLUTION
<b>1. OPERATING SYSTEM SOFTWARE</b> Assessment of server and workstation operating system update policies and procedures.	2	<b>HIGH</b>	Some updates to the servers occur. No workstation updates occur. Need to conduct updates to both servers and workstations on a regular basis (suggest monthly).	Create procedures and methods to update servers and workstations on a regular schedule
<b>2. ANTI-VIRUS</b> Assessment of Anti-virus solution, and update and deployment policies and procedures.	2	<b>HIGH</b>	All servers and workstations are updated automatically on a monthly basis. Suggest workstations receive updates from server.	Ensure a server functions as the focal point of downloading new virus signature definitions, and distributes those to the workstations, including those for remote users.
<b>3. FIREWALL</b> Assessment of Firewall solution, rules, and maintenance policies and procedures.	...	...	...	...

\*Score

- 1: Does not meet recommended security measure
- 2: Nearly meets recommended security measure
- 3: Meets recommended security measure

2. **A RISK ASSESSMENT SNAPSHOT OF YOUR ORGANIZATION:** A high impact heat chart highlighting degrees of network security risk within your organization.

3. **GALLAGHER, FLYNN BEST PRACTICES SOLUTIONS:** Recommended action steps where appropriate for each security area provided by Gallagher, Flynn Technology Consulting Division experts. i.e.:

*“Design and implement a Virtual Private Network (VPN) to control access to network resources from remote locations.”*

4. **PIECE OF MIND:** An updated understanding of your current network security environment and risk position.
